

Environmental policy

Resolux Group

Resolux is continually working to minimize the environmental impact of our products, by optimizing the luminous efficacy ratio (lm/watt) of our products.

In our production facilities and offices we strive to reduce the energy used by utilizing PIR sensors, LED's, power-safe mode on the PC's and monitors etc. and thereby reduce our carbon footprint.

Resolux is committed to continually motivates and educates employees in "green thinking " and inspire all to act environmentally responsible.

All waste fractions are disposed according to local regulations, and in the daily activities Resolux always have focus on the waste hierarchy, either by trying to eliminate, re-use or re-cycle our waste.

As our activities change and expand, Resolux does its utmost to reduce the environmental impact wherever possible, when taking technical and financial opportunities into account.
